

Caution for Bio-Spot "spot-on" products.

Some cats and dogs may have an allergic reaction to one of the chemicals in flea and tick "spot-ons." Farnam, who manufactures Bio-Spot, claims an incident rate of .01%. This year, we have had 2 non-lethal reactions from dogs using Bio-Spot leading to discomfort and skin irritation.

Unlike dogs, cats tend to be sensitive to the active ingredient permethrin at the dosage level found in Bio-Spot for Dogs. **DO NOT USE BIO-SPOT FLEA & TICK CONTROL FOR DOGS, ON CATS OR ANIMALS OTHER THAN DOGS.** Cats which actively groom (lick) or engage in close physical contact with recently treated dogs may be at risk of toxic exposure.

Nearly all dogs tolerate Bio-Spot for Dogs well. But, as with any pesticide product, some dogs may be sensitive to one or more of the ingredients. If your dog or cat shows signs of irritation or sensitivity to the product (redness or itchiness at the application site), discontinue use and bathe the dog or cat right away with a mild, non-insecticidal shampoo and seek veterinary advice.
